# *DZNR-768 Repeater*

## *INTRODUCING THE DZNR-768*

### *A VALUABLE TROUBLESHOOTING TOOL FOR MEDIUM TO LARGE NETWORKS*

The Delta Controls DZNR-768 divides a single network into four separate segments allowing a maximum of up to 50 controllers on any given segment. It improves the signal quality on each segment. The built in diagnostics provide checks for the condition of each controller as well as the general condition of the communications on each segment.

#### ***Features:***

- Can be used with any BACnet/MS/TP Network
- Divides a network into smaller segments for easy troubleshooting
- Supports twisted pair and Delta Controls CAT-5 MS/TP wiring
- Uses autobaud detection, removing the need for manual configuration
- Shows the online or offline status of each controller
- Built in capability protects against controllers up the network
- Displays the status of individual network segments
- Identifies controllers with duplicate addresses
- Detects unreliable character transmissions
- Identifies network wiring faults
